

# Product safety training for industrial and medical gases at your facility

## We offer safety training programs on:

- Argon
- Carbon dioxide
- Carbon monoxide
- Gas blends
- Helium
- Hydrogen
- Nitrogen
- Oxygen

If you're using industrial or medical gases, it's critical that your employees understand how to handle them safely—yet training can put significant demands on your time. Air Products can help ease the burden by providing on-site safety presentations on cryogenic liquids and compressed gases. Whether you need to train new hires or retrain your people, our knowledgeable engineers and safety specialists can deliver attention-getting programs. Our practical and concise training can help raise your employees' awareness of hazards, handling safeguards and best practices to promote a safe and healthy workplace.

## Tailored programs to meet your needs

Safety presentations may focus on a single gas or cover a range of gases and systems to reflect your processes and operations. Our trainers can customize your safety session by choosing from more than 42 safety- and equipment-related topics.

## Commitment to safety

At Air Products, nothing is more important than safety—not sales, not production, not profits. It is a commitment we all share and one that we share with our customers. We are consistently among the leaders in industrial gas safety performance and top performers of the Chemical Manufacturers Association's Responsible Care® program.

We manufacture and distribute our products with the utmost concern for the safety of our employees, our customers' employees and the people of the communities in which we operate. In keeping with this mission, we take a leadership role in encouraging gas safety training to minimize the possibility of accidents while allowing our customers to experience the full benefit of industrial gas usage.

## Practical safety training programs

Our programs address a wide range of gas safety topics. Typical training sessions last approximately two hours and include classroom instruction and a question and answer session. After the classroom presentation, our specialists can walk through operations with your employees to discuss proper use or storage of gases and answer questions. With each session, you'll receive appropriate Air Products Safetygrams. These brochures feature basic hazard information and practical procedures for working with cryogenic liquids and industrial gases.

## Training at your convenience

Scheduling is flexible, and we offer the option to repeat sessions to train multiple work shifts.

### Comprehensive course outline

<b>Properties and Hazards</b>	Recognition and labeling
	Flammability
	Toxicity
	Pressure
	Temperature
<b>Safety Practices</b>	Expansion
	Fog clouds
	Oxygen deficiency/enrichment
	Storage and handling
<b>Usage Guidelines</b>	Personal protective equipment
	Recommended actions
	Codes, standards and guidelines
	Application-specific considerations

### Who should attend

- Operations and maintenance personnel
- Plant and corporate safety staff
- Laboratory and R&D technicians
- Supervisors
- Emergency response teams
